

Ttile: Linking climate and dengue in the Philippines using a two-stage Bayesian spatio-temporal model

Link: <http://arxiv.org/abs/2506.22334v1>

Abstract: Dengue is an infectious disease which poses significant socioeconomic and disease burden in many tropical and subtropical regions of the world . We postulate a Bayesian spatio-temporal model and use the climate predictions from the first stage as inputs .

Ttile: (Fact) Check Your Bias

Link: <http://arxiv.org/abs/2506.21745v1>

Abstract: Automatic fact verification systems increasingly rely on large language models . We investigate how parametric knowledge biases affect fact-checking outcomes of the HerO system . Llama 3.1 labels nearly half the claims as "Not Enough Evidence"

Ttile: Towards Robust Fact-Checking: A Multi-Agent System with Advanced Evidence Retrieval

Link: <http://arxiv.org/abs/2506.17878v1>

Abstract: the rapid spread of misinformation in the digital era poses significant challenges to public discourse . Traditional human-led fact-checking methods struggle with the volume and velocity of online content . existing automated approaches often face limitations .

Ttile: Multitask LSTM for Arboviral Outbreak Prediction Using Public Health Data

Link: <http://arxiv.org/abs/2505.04566v1>

Abstract: This paper presents a multitask learning approach based on long-short-term memory (LSTM) networks . The proposed model concurrently performs binary classification (outbreak detection) and regression (case forecasting) tasks . A sliding window strategy was adopted to construct temporal features using varying input lengt .

Title: Using mathematical models of heart cells to assess the safety of new pharmaceutical drugs

Link: <http://arxiv.org/abs/2504.17694v1>

Abstract: Many drugs have been withdrawn from the market worldwide, at a cost of billions of dollars, because of patient fatalities due to them unexpectedly disturbing heart rhythm . Even drugs for ailments as mild as hay fever have been removed due to an unacceptable increase in risk of these heart rhythm disturbances . The predominant root cause has been identified by the whole pharmaceutical industry .
