

Ttile: Multimodal image registration for effective thermographic fever screening

Link: <http://arxiv.org/abs/2507.02955v1>

Abstract: Fever screening based on infrared thermographs (IRTs) is a viable mass screening approach during infectious disease pandemics . IRTs have found to be powerful, quick and non-invasive methods to detect elevated temperatures .

Ttile: Linking climate and dengue in the Philippines using a two-stage Bayesian spatio-temporal model

Link: <http://arxiv.org/abs/2506.22334v1>

Abstract: Dengue is an infectious disease which poses significant socioeconomic and disease burden in many tropical and subtropical regions of the world . We postulate a Bayesian spatio-temporal model and use the climate predictions from the first stage as inputs .

Ttile: (Fact) Check Your Bias

Link: <http://arxiv.org/abs/2506.21745v1>

Abstract: Automatic fact verification systems increasingly rely on large language models . We investigate how parametric knowledge biases affect fact-checking outcomes of the HerO system . Llama 3.1 labels nearly half the claims as "Not Enough Evidence"

Ttile: SAGE: Strategy-Adaptive Generation Engine for Query Rewriting

Link: <http://arxiv.org/abs/2506.19783v1>

Abstract: Query rewriting is pivotal for enhancing dense retrieval, yet current methods require large-scale supervised data or suffer from inefficient reinforcement learning (RL) exploration . guiding Large Language Models (LLMs) with a concise set of expert-crafted strategies, such as semantic expansion and entity disambiguation, substantially improves retrieval effectiveness on challenging benchmarks, including HotpotQA, FEVER, NFCorpus .

Title: Correcting Hallucinations in News Summaries: Exploration of Self-Correcting LLM Methods with External Knowledge

Link: <http://arxiv.org/abs/2506.19607v1>

Abstract: large language models (LLMs) have shown remarkable capabilities to generate coherent text . They suffer from the issue of hallucinations -- factually inaccurate statements . The self-correcting methods are promising .
