

Ttile: A review of model evaluation metrics for machine learning in genetics and genomics

Link: <https://www.semanticscholar.org/paper/46a19976a664a10487a6d19c8613cb64b88efdaa>

Abstract: Machine learning (ML) has shown great promise in genetics and genomics . Large and complex datasets have the potential to provide insight into many aspects of disease risk, pathogenesis of genetic disorders, and prediction of health and wellbeing . However, with this possibility there is a responsibility to exercise caution against biases and inflation of results .

Ttile: Generative Adversarial Networks (GANs): An Overview of Theoretical Model, Evaluation Metrics, and Recent Developments

Link: <https://www.semanticscholar.org/paper/fb1456a12630d97f25b80809865847b70c116ebb>

Abstract: Generative Adversarial Network (GAN) is an effective method to address this problem . The GANs provide an appropriate way to learn deep representations without widespread use of labeled training data .

Ttile: Matbench Discovery - An evaluation framework for machine learning crystal stability prediction

Link: <https://www.semanticscholar.org/paper/e4e37ea41783916400dbdd2818b5ca144f87de9c>

Abstract: Matbench Discovery simulates the deployment of machine learning energy models in a high-throughput search for stable inorganic crystals . We address the disconnect between (i) thermodynamic stability and formation energy and (ii) in-domain vs out-of-distribution performance .

Ttile: Design and Implementation of Machine Learning Evaluation Metrics on HPC Systems

Link: <https://www.semanticscholar.org/paper/4b33ef88f45a9b96762489caa06232ea7468dd21>

Abstract: HPC Systems Production Machine Learning bundles provide a diverse set of features that allow the parallelized creation and training of Machine learning models . a large set of evaluation metrics can be used to test the trained model to ascertain its performance . A new set of methods that incorporate the analysis of clusters and the selection of features have been proposed,

implemented .

Ttile: A Review on Machine Learning Methods for Customer Churn Prediction and Recommendations for Business Practitioners

Link: <https://www.semanticscholar.org/paper/8260b4d337d0c3b6cb02b1b1e815a4e9479e5b2f>

Abstract: Effectively anticipating and mitigating customer churn is vital for businesses to retain their customer base and sustain business growth . This research scrutinizes 212 published articles from 2015 to 2023 .
